JILANI

2010

2022

Backed by 1 decades of expertise, we journey
Third, continuing to provide an extensive variety
of flexible, innovative and personalized solutions

Sustainability

At JSI sustainability begins with board oversight and commitment follows through into management systems and processes integrate sustainability into day-to-day decision-making.

Corporate governance has always been a way to bring new thinking into decision-making at the top of the Group. In sustainability terms, a fresh perspective helps in identifying ways to bind the Group's core competencies with world's sustainability challenges. Owing to this resolute trend we resolve towards delivering sustainable logistics solutions.

Every bit of available knowledge, time and resources have been invested in making JSI Group a sustainable logistics Group and it looks forward to make a positive contribution to the society that trusts it and the environment it survives upon.

Core Values

JSI believes in improving the quality of services through new techniques and technologies. The company pursues a consistent policy of providing continuous learning product development through regular training programs to our work force on regular basis. These factors give a sense of satisfaction of achievement of personal and company goals.

- Reporting & Analysis
- Near to all industrial areas
- Easy access for all shipments coming from upcountry
- Within 5 Kms vicinity of Port Qasim

WAREHOUSE

Warehouse

Warehouse

- This section presents the processes that take place in the current facility of JSI. Most of the time, goods are placed in the inventory before being redirected to the particular operation. The exception might be cross-docking and software updating. However, before that all the goods are unloaded from the truck and put to the buffer area where the process of receiving takes place. All received pallets are checked with the delivery list. Later on, the Software generates the in-house label with the unique barcode which contains the information about goods, their quantity, supplier and the end customer. Despite the fact that each pallet has been already labelled by the supplier, the new labels have to be printed in order to minimize the information included in the barcode and to be recognized by JSI Software.
- Further, the order message is generated and goods are relocated according to the information stated in the order. The message is given by the production leader and can be screened and followed on the tablet attached to every forklift in the warehouse. Workers can check which item should be moved from which location to which. The new location should be registered in the system.
- After the goods are subjected to the certain operation, e.g. repacking, in most cases they are transported to the shipping area where they are waiting to be loaded on the truck and sent to the customer. Sometimes, it might happen that goods go back to the inventory where they are stored until the transport order is generated by the customer.

Warehouse

- The movement of goods within the warehouse facility is based on few factors. The most important is demand for certain services from customers' end. Apart from the services offered at the small production areas within the warehouse, some customers require unusual way of loading goods into the truck.
- Most of the goods are stored and transported on the standard EU pallets with dimensions of 80cm x 120cm, however, due to the collaboration with Asian suppliers, some cargo is moved with a help of sea pallets, which dimensions may vary from 100cm x 100cm to 120cm x 120cm.
- While collecting data, the summary of number of pallets owned by each customer respectively was made. For the need of project, every pallet unit of different kind, was converted into the number of pallet positions according to EU standards. The overall number of EU pallet positions that JSI has in stock.

Eco friendly warehouse

- We believe in Supply Chain Management practices and strategies that reduce the environmental and energy footprint of freight distribution.
- At our warehouse facility, we operate from 6 am to 6 pm in the sunlight .
- We are focused on material handling, repairing, packaging and transport to achieve respective environmental standards.
- We have plan to up-grade our staff training for better understanding and compliance to become a true Eco-Friendly Facility.

Corporate social responsibility

CSR being the part of Groups vision statement makes it an integral and important part of its day to day activity. The philosophy of JSI' corporate social responsibility (CSR) is its complete and utter adherence to the code of ethics.

JSI deeply understands the impact, the environment takes under a logistics company and feels responsible for its activities. Group's activities under GO GREENER Program are a way to express this responsibility.

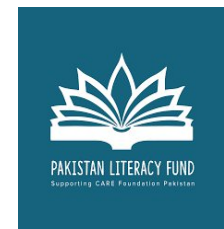

We ensure care for the natural environment as well as engages in humanitarian services to reduce pain, obstacles and potential threats for future generations. It provides humanitarian disaster relief for the affected areas and communities as well as volunteer for campaigns working towards the same objective.
